

## CASE STUDY

## A Stronger Digital Perimeter: Securing Connectivity with Ironclad TEK

Ironclad TEK delivered a custom VPN solution that strengthened network protection, minimized data risks, and restored lasting confidence in daily operations.

30-Minute Average Response Time

24/7 Service Availability

Tier 3 Private Cloud Infrastructure

800 Endpoint Devices Supported

### Overview / Summary

Ironclad TEK provided a targeted security overhaul for a client seeking stronger data protection and operational reliability. After implementing a custom VPN setup, the company significantly reduced exposure to external threats and data loss risks.

With its 20 years of technical expertise and enterprise-grade cybersecurity practices, Ironclad TEK enabled the client to work confidently across secure remote connections while maintaining productivity and peace of mind.

### Business Challenge & History

The client faced growing security concerns and operational inefficiencies stemming from unreliable remote connectivity.

- **Lack of secure remote access** left sensitive data exposed to potential breaches.
- **Inconsistent network reliability** disrupted day-to-day operations and remote work efficiency.
- **Limited internal expertise** made it difficult to implement advanced cybersecurity measures effectively.

### The Solution

Ironclad TEK delivered a focused engagement centered on setting up and configuring a VPN to strengthen remote access and reduce data risk. The work stayed tightly aligned to the client's request and environment.

- Established secure remote connectivity policies and access controls appropriate for day-to-day operations.
- Performed configuration validation and connectivity testing to confirm stable, reliable access for users.
- Provided clear usage guidance so staff could connect confidently and maintain good security

## The Benefits or Outcomes

The implementation produced measurable improvements in both security posture and confidence. The client experienced reliable, secure remote connectivity, significantly reducing exposure to online threats.

Ironclad TEK's hands-on approach and technical precision gave the business a resilient framework to manage access safely and avoid disruptions. The result was greater operational continuity, supported by a well-configured VPN environment that met real-world performance and protection needs.

## Going Forward

With a secure VPN foundation in place, the client can now focus on core operations without constant security concerns.

Ironclad TEK continues to serve as a trusted partner, offering proactive monitoring, responsive support, and advisory expertise to sustain network reliability and protect against emerging threats.

***"I love this company and would highly recommend it to anyone looking for IT services. They set up our VPN and now I worry a lot less about a cyber attack and or losing any data"***

Myles Sidorak, Business Owner

## Build Security That Thinks Ahead, Not Just Reacts
